Organised by

What is Jicable?

Jicable'19 is an international forum for the exchange of information in the fields of research, industrial development, installation, operation and diagnoses relating to insulated power cables and their accessories from low voltage and special cables up to ultra high voltage cables and new technology cables.

As for the 9 earlier Jicable conferences held between 1984 and 2015, **Jicable'19** will prove very useful to the following segments of the cable industry: researchers, engineers, decision-makers, raw materials suppliers, manufacturers, consultants, installers and users.

Why is Jicable'19 important?

Insulated power cables are increasingly used in electric power transmission and distribution networks. This is due to the significant progress achieved in the development of new technologies with higher performances, and motivated by increasing environmental pressure. Cables are recognised as a reliable means for the transmission and distribution of electrical energy. Jicable'19 will allow in-depth analysis of the State-of-the-Art and future perspectives : new materials, evolution in technologies, manufacturing process, maintenance policies and condition assessment, upgrading, refurbishment, lessons learnt from service, dielectric phenomena, thermal and thermo-mechanical behaviour... new innovative technical solutions for high power transmission: new superconductive materials as well as a closer look at major submarine cable projects connecting High Voltage networks in many countries.

More than **800 participants** from approximately **50 countries** attend the **Jicable** conference every 4 years.

This upcoming 10th edition, **Jicable'19** will present **48 oral sessions, 4 poster sessions, 5 tutorials, 2 technical visits and 1 technical exhibition.**
